

with integrated Wireless Fleet Management (WFM)

The RiMO SiNUS iON comes with an optional integrated WFM (Intelligent Wireless Module)

The WFM includes powerful advantages, it's functions are:

- ▶ Extended transparency of business processes
- ▶ Transaction monitoring
- ▶ different performance level settings (eg. child / educational mode, standard mode, advanced mode, race driver mode) available by simply pressing a button on PC or smartphone (Note: total power curve will be changed, not only the speed limit)
- ▶ monitoring of vehicle parameters
- ▶ full access to complete fleet data wherever internet access is available (encrypted, password protected, scalable user rights)
- ▶ scalable user rights to manage employees data access exactly

Remote diagnostics and maintenance (on explicit customers request only, password protected and encrypted)

- ▶ technical support via remote access
- ▶ software and firmware updates via remote access
- ▶ maintenance interval advise by RiMO technician

Driver benefits

- ▶ BOOST possible (similar to KERS: after charging - eg 1 min travel time -10 seconds of advanced engine power gettable)
- ▶ drivers get ability to track their friends driving data
- ▶ optimized training effects: coach can follow driving data to respond accurately on any optimization potential

Prices

- ▶ Fleet Management 390,- €
- ▶ BOOST-Button 140,- € \*

\*) only possible in combination with fleet management
